Solving Problems as well as Puzzles.

—The Importance of Health Delivery Research

Peter J. Pronovost, MD, PhD
Professor in the schools of Medicine, Public Health and Nursing at Johns Hopkins, Senior Vice President for Patient Safety and Quality, and Director of the Armstrong Institute for Patient Safety and Quality, Johns Hopkins Medicine

Patients have benefited significantly from the public’s investment in biomedical research. Yet patient outcomes fall far short of what is possible. Preventable harm is the third leading cause of death in the U.S. Come hear how research universities can help address the U.S. health care crisis. Learn how a program reduced one type of harm across the U.S and in several other countries and how we can use health delivery research to reduce other types of preventable harm.

Thursday, October 13, 2011
4:30–6:30 p.m. Homewood campus
Gilman 50
Q&A session and reception immediately following
