This course is an introduction to Tropical Biology and Evolution held in Ecuador's Highlands, Rain Forest, and in the Galapagos Islands.

The course will concentrate on the flora and fauna of these special habitats, but will also include the history, art, and culture of Ecuador.

Students will attend lectures on the JHU campus prior to departure on topics that include Biodiversity in Ecuador and Pre-Columbian Tribes, Culture and Art.

The final grade will be based on a field notebook that the student keeps, participation during the trip, and a final paper due in February.

Open to all majors
