

Promoting Power in the Nation's High Schools

Promoting power compares the number of seniors enrolled in a high school to the number of 9th graders enrolled in the high school four years earlier. It provides a measure of how efficiently and effectively high schools promote their students from grade to grade. Promoting power is also a good indicator of high school's that have both high and low graduation rates. It is very likely that high schools which have 60% or fewer seniors than freshmen four years earlier will have unacceptably low graduation rates by state and national standards. The graph below shows the promoting power for all high schools in the nation.* The tables that follow show how promoting power varies across the nation's high schools by free lunch level, minority concentration, location, and school size. For more information on Promoting Power and national and regional trends see *Locating the Dropout Crisis* by Robert Balfanz and Nettie Legters, Johns Hopkins University (<http://www.csos.jhu.edu/news.htm>).

*Promoting Power data is based on three year average for the classes of 2000, 2001, and 2002.
